

SANIRENT®

CLEANING & MAINTENANCE

– Toilet provision made simple

SaniRent is Danfo's complete package for operation and maintenance of public conveniences, which is based on our great experience and extensive knowledge of public conveniences.

We have used this knowledge to develop services, which provide added value to you as a customer and to the visitors of our public conveniences. Even those that do not have toilet facilities from Danfo can take advantage of a number of our services.

Maintaining and providing public conveniences is an important undertaking. The accessibility, hygiene and cleanliness of the toilets have a great influence on the overall impression of a place or destination. Everyone wants to be able to offer or visit good public toilets. The solution is SaniRent.

– How Sanirent works

SaniRent combines a specially developed program for the cleaning and maintenance of toilet installations for continuous operation and service. For those who want new or freshened-up public toilets, the package can also include brand new buildings or a refurbishment with Danfo's Modulet concept.

With SaniRent no initial investment is required. The entire package from new facilities to daily cleaning is covered by a monthly fee. Just like our toilet installations, SaniRent can be adapted to your requirements and needs.

This means that everyone has the opportunity of offering better public toilets and the added benefits such as enhanced accessibility, better environment and increased public health and safety.

All Danfo's cleaning and maintenance staff are trained and certified at our training centre.

– The service manual

The practical application of the Sanirent concept is detailed within our Service Manual. Developed over many years, the book contains descriptions and illustrations of each part of the cleaning and maintenance process, as well as details on how often they should be performed and the protective equipment to be used. The Service Manual also includes routines for staff health and safety.

– A safe working environment

The safety of staff as well as visitors is a priority for Danfo. Negating risks as far as possible is an important part of the Sanirent concept and something we monitor closely.

Safety measures and protective equipment are prescribed for the handling of chemicals and cleaning products, as well as for the construction of the toilets themselves.

Our staff should never have to endure violence, abuse or threats. Efficient counter measures are in place and can be put into action at the discretion of the individual staff member. As a result of this zero tolerance attitude our toilets become safer places for both visitors and staff.

– Environmental policy

Danfo is certified according to ISO14001 and environmental considerations play an important part in all Danfo's activities. Everything that we do, from product development, manufacturing and beyond, is done in accordance with our environmental policy.
